Carnivorous Plants Carnivorous plants have special ways of getting food.

Most plants use sunlight, water, and <u>nutrients</u> from the soil to get the food they need to grow and survive. Carnivorous plants grow in places where the soil is poor in nutrients. They get the nutrients they are missing by capturing and eating small animals and insects.

There are many different types of carnivorous plants. These different plants are not all related to each other. However, they do share common features. All carnivorous plants use their leaves as traps to catch food. Sticky traps attach to insects and stop them from

#### **Pitcher Plant**

Pitcher plants have a pitfall trap. They create sweet smells to attract insects. Pitcher plants have leaves that look like flowers for insects to eat.

nsects, such as flies, ente he leaves to eat. The insec come trapped in the leave

and are digested

The outer edges of the leaf ar overed in hairs. They make hard for the insect to crawl ou

Liquid in the pitcher plant

keeps flying insects from taking off

The waxy sides of the leaf

ke it very difficult for insec to climb out

insect falls into the liquid bottom of the plant a
